**Portfolio Description**

Thrivent Aggressive Allocation Portfolio is the most aggressive option in Thrivent's suite of Asset Allocation Portfolios and is designed for investors with the longest time horizon and highest risk tolerance. The Portfolio is globally-diversified across major equity and fixed-income sectors and styles. The Portfolio is actively-managed and invests in a combination of other portfolios managed by the Adviser and direct investments in stocks, bonds, and derivatives.

**Investment Strategy/Process**

The Portfolio has a long-term target allocation of 95% equity securities and 5% fixed-income. The Portfolio's asset allocation strategy starts with the construction of a model that sets the long-term target allocations for the broad asset classes of equity and fixed-income. Next, the target weightings for sub-classes are determined. Equity sub-classes are often based on market-capitalization (large, mid, and small), investment style (such as growth and value), economic sector and world region. The Portfolio may invest in emerging markets. Fixed-income sub-classes may be based on maturity, duration, credit quality and security type. The portfolio management team actively manages the Portfolio with overweight and underweight positions in the various sub-classes based on their views of the market and economy. Individual stocks and bonds are analyzed and selected on an ongoing basis. The Portfolio is regularly rebalanced to ensure that the holdings are within appropriate ranges.

**Growth of \$10,000 and Calendar Year Performance (%)**

Performance shown reflects annual portfolio operating expenses. Performance data does not include any charges related to an insurance or annuity contract in which this portfolio may be held, which would reduce performance data shown.

**Average Annualized Returns (%)**

Periods less than one year are not annualized.

**All data represents past performance. Past performance does not guarantee future results. The investment return and principal value of the investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than the original cost. Current performance may be lower or higher than the performance data quoted. Call 800-521-5308 for performance results current to the most recent month end.**

Thrivent Variable Portfolios are only available to the public through a variable life or a variable annuity contract. Performance data shown does not include any insurance or annuity charges, which if included would lower the returns. Contact the provider for information and a contract prospectus which will include information on the additional charges and fees that apply to the specific contract.

**Investment Objective**

Thrivent Aggressive Allocation Portfolio seeks long-term capital growth.

**Who Should Consider Investing?**

The Portfolio may be suitable for investors who:

- Seek long-term growth.
- Have a long-term investment time horizon and an aggressive risk tolerance.
- Are able to withstand a high level of risk and volatility in pursuit of potentially high long-term returns.

**Portfolio Operating Expense Ratio**

Gross: 0.95%  
Net: 0.76%

The Adviser has contractually agreed, for as long as the current fee structure is in place, to waive certain investment advisory fees associated with the Portfolio. Refer to the expense table in the Portfolio's prospectus.

**Benchmark(s)**

Indexes are unmanaged and do not reflect the fees and expenses associated with active management. Investments cannot be made directly into an index.

*Risks: The Portfolio invests in other portfolios managed by the Adviser and in directly-held equity and debt instruments. The Portfolio is subject to its own fees and expenses and the expenses of the other portfolios in which it invests, as well as the risks of the other portfolios in which it invests. The value of the Portfolio is influenced by factors impacting the overall market, certain asset classes, certain investment styles, and specific issuers. The Portfolio may incur losses due to investments that do not perform as anticipated by the investment adviser. Foreign investments in developed and emerging markets involve additional risks, including currency fluctuations, liquidity, political, economic and market instability, and different legal and accounting standards. Bond prices may decline during periods of rising interest rates. Credit risk is the risk that an issuer of a debt security may not pay its debt, and high yield securities are subject to increased credit risk as well as liquidity risk. Quantitative investing uses models and factors that rely on historical data and may be incomplete. The use of derivatives (such as futures and swaps) involves additional risks and transaction costs, which could leave the Portfolio in a worse position than if it had not used these instruments. The Portfolio may engage in active and frequent trading of portfolio securities in implementing its principal investment strategies, which may result in higher transaction costs and higher taxes. The Portfolio is considered "non-diversified" according to SEC regulations, which means that it may invest a greater percentage of its assets in the securities of any single issuer compared with diversified portfolios. These and other risks are described in the Portfolio's prospectus.*
