Facts about Thrivent's Index Portfolio product suite

Five equity indexes

Thrivent offers five different index portfolios providing U.S., International and ESG exposure across the market capitalization universe. The domestic portfolios track the S&P SmallCap 600¹, S&P MidCap 400², S&P 500³, and MSCI KLD 400 Social⁴ Indexes. The international portfolio tracks the MSCI EAFE⁵ Index.

Market replication

We utilize full replication for tracking the indexes. This means that each portfolio tracks the index by directly buying—in the same proportions—the underlying securities that make up the index.

Broad market exposure

Combined, these five portfolios track approximately 90% of the U.S. market capitalization and approximately 85% of international market capitalization.⁶ The index portfolios provide investors with an extensive amount of potential market exposure.

Risks: The Portfolio primarily invests in U.S. stocks with outstanding environmental, social and governance (“ESG”) ratings and excludes companies with negative social or environmental impacts. The Portfolio’s ESG investment strategy limits the types and number of investment opportunities available to the Portfolio, which may result in underperformance relative to other funds that do not have an ESG focus. The value of the Portfolio is influenced by factors impacting the overall market, certain asset classes, certain investment styles, and specific issuers. An ETF is subject to additional fees and expenses, tracking error, and the risks of the underlying investments that it holds. The use of derivatives such as futures involves additional risks. Large cap companies may be unable to respond quickly to new competitive challenges and may not be able to attain a high growth rate. Medium-sized companies often have greater price volatility and less liquidity than larger companies. Markets may also be impacted by domestic or global events, including public health threats, terrorism, natural disasters or similar events. The Portfolio attempts to track the performance of the MSCI KLD 400 Social Index but the return may not match

that of the Index due to several factors including timing and expenses. The Portfolio may engage in active and frequent trading of portfolio securities, which may result in higher transaction costs and higher taxes. These and other risks are described in the prospectus.

The Portfolio is only available to the public through a variable life or variable annuity product. Contact the applicable insurance company for more information and a contract prospectus which will include information on the additional charges and fees that apply to the specific contract.
