

Thrivent International Index Portfolio

Inception Date Apr. 29, 2020
Ticker QTIIPX
Total Portfolio Assets \$190.93 million
Expense Ratio Gross: 0.45%

Portfolio Description

This portfolio normally invests in the common stocks of companies included in the MSCI EAFE Index in the proportions at which they are represented in the Index. It is designed to provide investors with allocations to developed international equity investing and includes allocations to large and mid-cap international companies in developed markets, across the growth, value, and core investment styles. Investors should be comfortable with the higher level of volatility that may be associated with international investing.

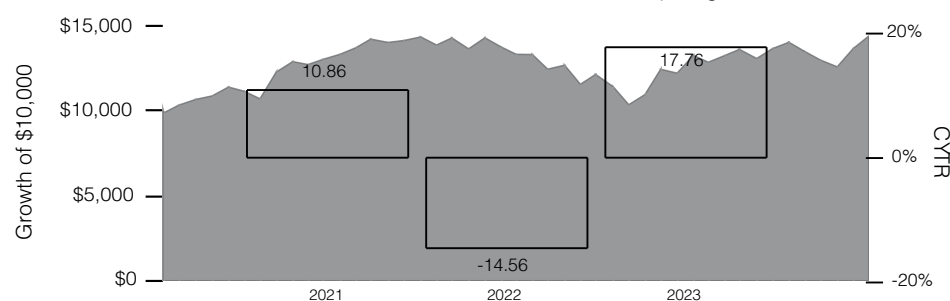

Investment Strategy/Process

This is a passively-managed portfolio, which means that the portfolio manager does not actively choose the securities that should make up the Portfolio. The MSCI EAFE Index is comprised of company stocks from developed international markets (excluding the US and Canada). The Index is adjusted quarterly, and when changes to the Index occur, the portfolio manager will attempt to replicate these changes within the Portfolio. However, any such changes may result in slight variations from time to time.

Growth of \$10,000 and Calendar Year Performance (%)

□ Calendar Year Total Returns (CYTR) - without charges, fees, or expenses

■ Total Market Value (reflects reinvestment of all dividends and capital gains) - \$14,402

Average Annualized Returns (%) Periods less than one year are not annualized

All data represents past performance. Past performance does not guarantee future results. The investment return and principal value of the investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than the original cost. Current performance may be lower or higher than the performance data quoted. Call 800-847-4836 or visit thriventportfolios.com for performance results current to the most recent month-end.

The Portfolio is only available to the public through a variable life or variable annuity product. Performance data shown does not include any insurance or annuity charges, which if included would lower the returns. Contact the applicable insurance company for more information and a contract prospectus which will include information on the additional charges and fees that apply to the specific contract.

**The Morningstar average represents the average total return annualized when greater than one year for all reported funds in the category. Morningstar averages do not include sales charges/fees. If included, returns would have been lower. ©2024 Morningstar, Inc. All rights reserved. Investment Objective

Thrivent International Index Portfolio seeks total returns that track the performance of the MSCI EAFE Index.

Benchmark(s)

Any indexes shown are unmanaged and do not reflect the typical costs of investing. Investors cannot invest directly in an index.

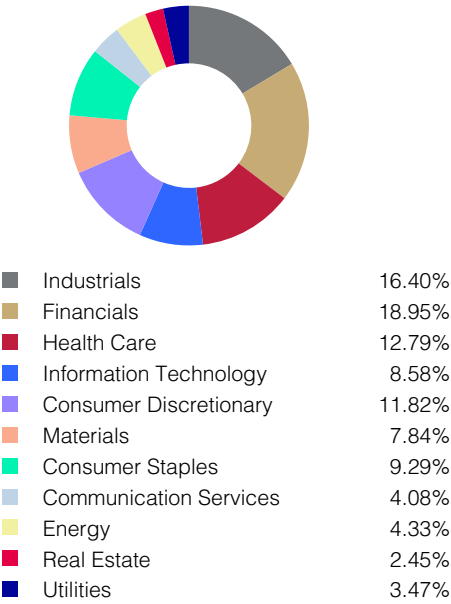

MSCI EAFE Index - USD Net Returns tracks the performance of developed-economy stocks in Europe, Australasia and the Far East.

Portfolio Management & Experience

Risks: The value of the Portfolio is influenced by a number of factors, including the performance of the broader market and risks specific to the Portfolio's asset classes, market cap groups, and issuers. Foreign investments involve additional risks, such as currency fluctuations and political, economic and market instability. The use of futures contracts involves additional risks such as a loss in value in the underlying instrument, which could decrease the Portfolio's value. The Portfolio attempts to track the performance of the MSCI EAFE Index, but the return may not match that of the Index due to several factors including timing, expenses, and the foreign investment process. Securities markets generally tend to move in cycles with periods when security prices rise and periods when security prices decline. These and other risks are described in the prospectus.

Diversification

Data is based on country of domicile. Some companies may be domiciled in offshore locations that may not reflect the primary place of business.

[†]Turnover Ratio: 12-month rolling as of Nov 30 2023. A measure of a Portfolio's trading activity calculated by dividing the lesser of long-term purchases/sales by average long-term market value.
