

Thrivent Large Cap Growth Portfolio

Inception Date Jan. 09, 1987
Ticker QTLCGX
Total Portfolio Assets \$2.86 billion
Expense Ratio Gross: 0.43%

Portfolio Description

This Portfolio looks to provide investors with consistent, competitive performance through favorable stock selection while monitoring risk. The Portfolio typically invests in large companies across the growth spectrum. Growth stocks are companies whose earnings are expected to grow at an above-average rate relative to the market. Large companies are generally considered to be more stable but may not have the fast growth potential of smaller companies or the ability to respond as quickly to competitive challenges and changing market conditions.

Investment Strategy/Process

The portfolio management team seeks to add value through stock selection and active management, while monitoring risk in the portfolio. Analysts identify securities that they believe may provide strong, long-term, organic growth opportunities, or that are uniquely positioned within the industry. Each analyst uses a proprietary research process, considering the factors and characteristics that are most relevant for each industry. The analyst team's "best ideas" in each sector are presented to the portfolio management team as candidates for the portfolio. The Portfolio's managers are responsible for portfolio construction and risk management.

Growth of \$10,000 and Calendar Year Performance (%)

□ Calendar Year Total Returns (CYTR) - without charges, fees, or expenses
 ■ Total Market Value (reflects reinvestment of all dividends and capital gains) - \$42,511

All data represents past performance. Past performance does not guarantee future results. The investment return and principal value of the investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than the original cost. Current performance may be lower or higher than the performance data quoted. Call 800-847-4836 or visit thriventportfolios.com for performance results current to the most recent month-end.

The Portfolio is only available to the public through a variable life or variable annuity product. Performance data shown does not include any insurance or annuity charges, which if included would lower the returns. Contact the applicable insurance company for more information and a contract prospectus which will include information on the additional charges and fees that apply to the specific contract.

**The Morningstar average represents the average total return annualized when greater than one year for all reported funds in the category. Morningstar averages do not include sales charges/fees. If included, returns would have been lower. ©2026 Morningstar, Inc. All rights reserved. Risks: Large companies may be unable to respond quickly to new competitive challenges and may not be able to attain a high growth rate. The Portfolio's value is influenced by a number of factors, including the performance of the broader market and risks specific to the Portfolio's asset classes, investment styles, and issuers. Foreign investments involve additional risks, such as currency fluctuations and political, economic and market instability. The Adviser's assessment of investments may prove incorrect, resulting in losses or poor performance. A non-diversified portfolio is generally more susceptible to the risk that events or developments affecting a particular issuer or industry will significantly affect performance results. Common stocks of companies that rely extensively on technology, science or communications in their product development or operations may be more volatile than the overall stock market and may or may not move in tandem with the overall stock market. These and other risks are described in the prospectus.
