Expense Ratio Gross: 0.25%

Portfolio Description

This Portfolio normally invests substantially all its assets in the medium-sized company common stocks in the S&P MidCap 400® Index in the proportions at which they are represented in the Index. The Portfolio typically invests in a combination of mid-sized companies across the growth and value spectrums. Mid-sized companies may be more established than small companies, but still have the opportunity to experience faster growth as they seek to become large-cap companies. However, they typically have greater volatility (or more risk) than larger, more-seasoned companies.

Investment Strategy/Process

This is a passively-managed portfolio, which means that the portfolio manager does not actively choose the securities that should make up the Portfolio. The S&P MidCap 400® Index is a capitalization-weighted index of 400 medium capitalization stocks chosen for market size, liquidity, and industry representation. The Index is adjusted quarterly, and when changes to the Index occur, the portfolio manager will attempt to replicate these changes within the Portfolio. However, any such changes may result in slight variations from time to time.

All data represents past performance. Past performance does not guarantee future results. The investment return and principal value of the investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than the original cost. Current performance may be lower or higher than the performance data quoted. Call 800-847-4836 or visit thriventportfolios.com for performance results current to the most recent month-end.

The Portfolio is only available to the public through a variable life or variable annuity product. Performance data shown does not include any insurance or annuity charges, which if included would lower the returns. Contact the applicable insurance company for more information and a contract prospectus which will include information on the additional charges and fees that apply to the specific contract.

**The Morningstar average represents the average total return annualized when greater than one year for all reported funds in the category. Morningstar averages do not include sales charges/fees. If included, returns would have been lower. ©2025 Morningstar, Inc. All rights reserved. Risks: Medium-sized companies often have greater price volatility, lower trading volume, and less liquidity than larger, more established companies. The Portfolio's value is influenced by a number of factors, including the performance of the broader market, and risks specific to the Portfolio's asset classes and issuers. The use of futures contracts involves additional risks such as a loss in value in the underlying instrument, which could decrease the Portfolio's value. The Portfolio attempts to track the performance of the S&P MidCap 400 Index, but the return may not match that of the Index due to several factors including timing and expenses. These and other risks are described in the prospectus.
