

# Thrivent Government Bond Portfolio

**Ticker** QTGBPX

**Inception date** June 14, 1995

**Objective** Thrivent Government Bond Portfolio seeks total return, consistent with preservation of capital.

## Portfolio key points

Thrivent Government Bond Portfolio invests in high-quality fixed-income securities and is designed to provide income and capital preservation.

### High-quality portfolio designed for income

Thrivent Government Bond Portfolio is designed to provide income and capital preservation by investing in a high-quality portfolio of primarily U.S. government securities. This is one of the most liquid portions of the fixed income market. The Portfolio mainly has exposure to AAA-rated bonds, which historically have had low instances of default.

### A variety of securities

While the portfolio managers invest at least 80% of the Portfolio in U.S. government securities, there are a variety of options to consider within this broad sector and beyond. The Portfolio has exposure to U.S. Treasury bonds and notes, U.S. agency bonds, and securitized assets such as agency mortgage-backed securities. The portfolio managers may also invest in higher-quality corporate bonds and may further diversify the portfolio by investing a small portion of the portfolio outside of the United States.

### Portfolio positioning

The portfolio managers employ both fundamental and technical analysis to inform their views, and use derivatives to manage duration and yield curve positioning. While there typically will not be significant changes in exposure, the portfolio managers will adjust the portfolio's yield curve exposure and duration to match their macroeconomic views.

## Portfolio long-term target allocations\*

### ■ 90% U.S. government securities

- + **Treasury:** Bonds and notes issued by the U.S. Treasury; inflation-protected securities issued by the U.S. Treasury
- + **Securitized:** Mortgage-backed securities issued by U.S. government-sponsored enterprises (GNMA, FMCC, FNMA)
- + **Agency:** Bonds issued by U.S. government federal agencies and government-sponsored enterprises

### ■ 10% other fixed income securities

- + **Corporate:** Highly-rated U.S. corporate bonds
- + **International:** U.S. dollar denominated foreign government bonds
- + **Cash**

\*Target allocations are subject to change.

### Kent L. White, CFA

VP, Fixed Income Mutual Funds  
 Industry since 1999  
 Thrivent since 1999  
 Portfolio since 2023

### Jon-Paul (J.P.) Gagne

Senior Portfolio Manager  
 Industry since 2004  
 Thrivent since 2018  
 Portfolio since: 2022

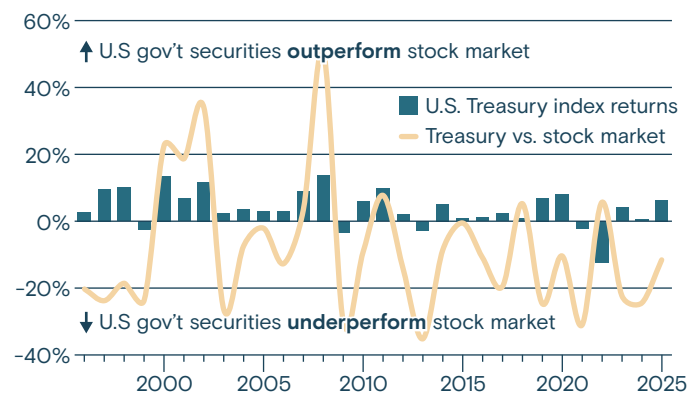

“While we are experts in the government and securitized sectors, we also collaborate with our experienced analysts to understand specific securities as well as with other portfolio managers to understand other sectors, which helps inform our views on the broader economy.”

## U.S. government securities may help diversify your portfolio over time

The graph to the right shows the returns of U.S. government securities (bars) as well as their returns relative to the broad U.S. stock market (lines). U.S. government securities are represented by the Bloomberg U.S. Treasury Index,<sup>1</sup> while the U.S. stock market is represented by the S&P 500<sup>®</sup> Index.<sup>2</sup> While U.S. government securities typically underperform the U.S. stock market, they have had positive returns most calendar years.

Even in years when government securities are underperforming the stock market, they may have positive returns. This is not surprising, considering the risk and reward characteristics of the two segments of the market. However, there are years when government securities have outperformed the stock market as well. This dynamic between government securities and the stock market suggests that pairing government securities and other asset classes, like U.S. stocks, may result in a more diversified portfolio.

### U.S. gov't securities' return over time & relative to stocks 1996–2025

U.S. gov't securities' performance, 1996–2025			
Calendar year returns		Cal year returns relative to stock market	
5 negative	25 positive	Outperformed 8	Underperformed 22

Any indexes shown are unmanaged and do not reflect the typical costs of investing. Investors cannot invest directly in an index.

**1Bloomberg U.S. Treasury Index** measures the performance of the public debt obligations of the U.S. Treasury with remaining maturities of one year or more.

**2S&P 500<sup>®</sup> Index** is a market-cap weighted index that represents the average performance of a group of 500 large-capitalization stocks.

**Risks:** U.S. government securities may not be fully guaranteed by the U.S. government and issues may not have the funds to meet their payment obligations. The value of U.S. government securities may be affected by changes in credit ratings, which may be negatively impacted by rising national debt. The value of mortgage-related and other asset-backed securities will be influenced by the factors affecting the housing market and the assets underlying such securities. Debt securities are subject to risks such as declining prices during periods of rising interest rates and credit risk, or the risk that an issuer may not pay its debt. The use of derivatives (such as futures) involves additional risks and transaction costs. Inflation-linked debt securities, such as TIPS, are subject to the effects of changes in market interest rates caused by factors other than inflation

(real interest rates). The Adviser's assessment of investments may prove incorrect, resulting in losses or poor performance. When bond inventories are low in relation to the market size, there is the potential for decreased liquidity and increased price volatility. The Portfolio's value is influenced by the performance of the broader market. The Portfolio's value is influenced by the performance of the broader market. The Portfolio may engage in active and frequent trading of portfolio securities, which may result in higher transaction costs and higher taxes. Sovereign debt securities are subject to additional risks. These and other risks are described in the prospectus.

The Portfolio is only available to the public through a variable life or variable annuity product. Contact the applicable insurance company for more information and a contract prospectus which will include information on the additional charges and fees that apply to the specific contract.

**Before investing, investors should consider carefully the investment objectives, risks, charges and expenses of a portfolio and the variable insurance product. This and other important information is contained in the portfolio and variable insurance product prospectuses, which may be obtained from a financial professional or by contacting the applicable insurance company. Read them carefully before investing.**
