

Thrivent Income Portfolio

Inception Date Jan. 09, 1987
Ticker QTINPX
Total Portfolio Assets \$1.33 billion
Expense Ratio Gross: 0.43%

Portfolio Description

This portfolio invests primarily in investment-grade corporate bonds, government bonds, asset-backed securities, and mortgage-backed securities. The Portfolio may also invest a portion of its assets in high yield bonds, leveraged loans and preferred stock, and may opportunistically invest in foreign issuers (including emerging market issuers), non-agency mortgage-backed securities and commercial mortgage-backed securities. The Portfolio typically has its largest allocation in BBB-rated bonds, which are the lowest-tier of investment grade bonds. The Portfolio uses derivatives in order to manage the Portfolio's duration, or interest rate risk.

Investment Strategy/Process

The portfolio management team seeks to add value through security selection and active management, and monitors risk in an effort to build a well-diversified portfolio. The team uses fundamental and other investment research techniques to determine which securities to buy and sell. The Portfolio's investment adviser may purchase bonds of any maturity and generally focuses on U.S. companies that it believes are financially sound and have strong cash flows and earnings. The team also considers the macro-economic environment and performs an ongoing assessment of relative value and risk. Based on this market outlook, the Portfolio may take overweight and underweight positions in various sectors and industries and may reallocate across the higher and lower-quality segments of the bond market. The analysts perform research and provide buy/sell recommendations while the portfolio manager is responsible for portfolio construction and risk management.

All data represents past performance. Past performance does not guarantee future results. The investment return and principal value of the investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than the original cost. Current performance may be lower or higher than the performance data quoted. Call 800-847-4836 or visit thriventportfolios.com for performance results current to the most recent month-end.

The Portfolio is only available to the public through a variable life or variable annuity product. Performance data shown does not include any insurance or annuity charges, which if included would lower the returns. Contact the applicable insurance company for more information and a contract prospectus which will include information on the additional charges and fees that apply to the specific contract.

**The Morningstar average represents the average total return annualized when greater than one year for all reported funds in the category. Morningstar averages do not include sales charges/fees. If included, returns would have been lower. ©2024 Morningstar, Inc. All rights reserved. Risks: Debt securities are subject to risks such as declining prices during periods of rising interest rates and credit risk, or the risk that an issuer may not pay its debt. High yield securities are subject to increased credit risk as well as liquidity risk. The use of derivatives such as futures involves additional risks and transaction costs. Foreign investments involve additional risks, such as currency fluctuations and political, economic and market instability, which may be magnified for investments in emerging markets. To the extent that the financials sector continues to represent a significant portion of the Portfolio, the Portfolio will be sensitive to changes in, and its performance may depend to a greater extent on, factors impacting this sector. U.S. Government securities may not be fully guaranteed by the U.S. Government and issues may not have the funds to meet their payment obligations. The value of U.S. government securities may be affected by changes in credit ratings, which may be negatively impacted by rising national debt. The Adviser's assessment of investments may prove incorrect, resulting in losses or poor performance. The Portfolio's value may be affected by factors specific to an issuer within the Portfolio. The London Interbank Offered Rate (LIBOR) is being phased out, which brings uncertainty to instruments tied to it. When bond inventories are low in relation to the market size, there is the potential for decreased liquidity and increased price volatility. Securities markets generally tend to move in cycles with periods when security prices rise and periods when security prices decline. The value of mortgage-related and other asset-backed securities will be influenced by the factors affecting the housing market and the assets underlying such securities. These and other risks are described in the prospectus.
