

Thrivent Limited Maturity Bond Portfolio

Inception Date Nov. 30, 2001
Ticker QTLMBX
Total Portfolio Assets \$766.17 million
Expense Ratio Gross: 0.44%

Portfolio Description

This portfolio invests primarily in investment-grade corporate bonds, government bonds, asset-backed securities, mortgage-backed securities, and collateralized debt obligations. The Portfolio may also invest a portion of assets in foreign securities. The dollar-weighted average effective maturity for the Portfolio is expected to be between one and five years. The Portfolio's shorter duration makes it less sensitive to interest rate changes than some longer-duration portfolios. As a result, the Portfolio may be appropriate for an investor who is seeking the opportunity to generate a modest level of income (with some investment risk), but with less interest rate risk and a lower return potential than most longer-maturity bond portfolios.

Investment Strategy/Process

The portfolio management team seeks to add value through security selection and active management, and monitors risk in an effort to build a well-diversified portfolio. The team uses fundamental and other investment research techniques to determine which debt securities to buy and sell. The Portfolio's investment adviser generally focuses on issuers that it believes are financially sound and that have strong cash flows and earnings. The Portfolio may use an interest-rate management technique that includes the purchase and sale of U.S. Treasury securities and related futures contracts for the purpose of managing the duration of the Portfolio.

All data represents past performance. Past performance does not guarantee future results. The investment return and principal value of the investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than the original cost. Current performance may be lower or higher than the performance data quoted. Call 800-847-4836 or visit thriventportfolios.com for performance results current to the most recent month-end.

The Portfolio is only available to the public through a variable life or variable annuity product. Performance data shown does not include any insurance or annuity charges, which if included would lower the returns. Contact the applicable insurance company for more information and a contract prospectus which will include information on the additional charges and fees that apply to the specific contract.

**The Morningstar average represents the average total return annualized when greater than one year for all reported funds in the category. Morningstar averages do not include sales charges/fees. If included, returns would have been lower. ©2024 Morningstar, Inc. All rights reserved. Investment Objective

Thrivent Limited Maturity Bond Portfolio seeks a high level of current income consistent with stability of principal.

Benchmark(s)

Any indexes shown are unmanaged and do not reflect the typical costs of investing. Investors cannot invest directly in an index.

Bloomberg Government/Credit 1-3 Year Bond Index measures the performance of U.S. government bonds with maturities of 1-3 years.

Portfolio Management & Experience

Cortney Swensen, CFA—Industry: 2005, Portfolio: 2020; Jon-Paul (JP) Gagne—Industry: 2004, Portfolio: 2021

Risks: U.S. Government securities may not be fully guaranteed by the U.S. Government and issues may not have the funds to meet their payment obligations. The value of U.S. government securities may be affected by changes in credit ratings, which may be negatively impacted by rising national debt. The value of mortgage-related and other asset-backed securities will be influenced by the factors affecting the housing market and the assets underlying such securities. In addition to typical risks associated with fixed income and asset-backed securities, collateralized debt obligations are subject to additional risks. Debt securities are subject to risks such as declining prices during periods of rising interest rates and credit risk, or the risk that an issuer may not pay its debt. The use of futures contracts involves additional risks such as a loss in value in the underlying instrument, which could decrease the Portfolio's value. High yield securities are subject to increased credit risk as well as liquidity risk. The Adviser's assessment of investments may prove incorrect, resulting in losses or poor performance. The Portfolio's value may be affected by factors specific to an issuer within the Portfolio. The London Interbank Offered Rate (LIBOR) is being phased out, which brings uncertainty to instruments tied to it. When bond inventories are low in relation to the market size, there is the potential for decreased liquidity and increased price volatility. Securities markets generally tend to move in cycles with periods when security prices rise and periods when security prices decline. In unusual circumstances, the Portfolio could experience a loss when selling portfolio securities to meet redemption requests for a variety of reasons. These and other risks are described in the prospectus.
