

Thrivent Small-Mid Cap ESG ETF

Inception Date Oct. 05, 2022 **Ticker** TSME **Total Fund Assets** \$73.12 million **Expense Ratio** Gross: 0.65%

Fund Description

This ETF looks to provide investors with consistent, competitive performance through favorable stock selection while monitoring risk. The ETF typically invests in a combination of small- and mid-sized companies across the growth and value spectrums. The management team looks for stocks that it determines have sustainable long-term business models and a demonstrated commitment to environmental, social and corporate governance (“ESG”) policies, practices or outcomes.

Investment Strategy/Process

The portfolio management team seeks to identify companies that have sustainable long-term business models that drive financial success and risk management. The team looks for small- to mid-sized companies that have strong growth prospects, are in an industry with a positive economic outlook, have high-quality management, and/or have a strong financial position, as well as a demonstrated commitment to ESG policies. They use fundamental, quantitative, and technical investment research techniques to determine what securities to buy and sell.

All data represents past performance. Past performance does not guarantee future results. The investment return and principal value of the investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than the original cost. A fund's performance for very short time periods may not be indicative of future performance. Market returns are based on the midpoint of the bid/ask spread at market close (typically, 4 p.m. ET) and do not represent returns an investor would receive if shares were traded at other times. Current performance may be lower or higher than the performance data quoted. Call 800-847-4836 or visit thriventETFs.com for performance results current to the most recent month-end.

Performance shown assumes the reinvestment of all dividends and capital gains.

This ETF is different from traditional ETFs. Traditional ETFs tell the public what assets they hold each day. This ETF will not. This may **create additional risks** for your investment. For example, you may have to pay more money to trade the ETF's shares. This ETF will provide less information to traders, who tend to charge more for trades when they have less information. The price you pay to buy ETF shares on an exchange may not match the value of the ETF's portfolio. The same is true when you sell shares. These price differences may be greater for this ETF compared to other ETFs because it provides less information to traders. These additional risks may be even greater in bad or uncertain market conditions. The ETF will publish on its website each day a “Proxy Portfolio” designed to help trading in shares of the ETF. While the Proxy Portfolio includes some of the ETF's holdings, it is not the ETF's actual portfolio. The differences between this ETF and other ETFs may also have advantages. By keeping certain information about the ETF secret, this ETF may face less risk that other traders can predict or copy its investment strategy. This may improve the ETF's performance. If other traders are able to copy or predict the ETF's investment strategy, however, this may hurt the ETF's performance. For additional information regarding the unique attributes and risks of the ETF, see the Principal Risks section of the prospectus.

Risks: The ETF is newly formed and does not have any operating history. Small and medium-sized companies often have greater price volatility, lower trading volume, and less liquidity than larger, more established companies. The ETF's value is influenced by a number of factors, including the performance of the broader market, and risks specific to the Fund's asset classes, investment styles, and issuers. Markets may also be impacted by domestic or global events, including public health threats, terrorism, natural disasters or similar events. ESG strategies may result in investment returns that may be lower than if decisions were based solely on investment considerations. Because ESG criteria exclude certain securities/products for non-financial reasons, investors may forego some market opportunities available to those who do not use these criteria. ETFs trade like stocks, are subject to investment risk, and will fluctuate in market value. Unlike mutual funds, ETF shares are not individually redeemable directly with the Fund, and are bought and sold on the secondary market at market price, which may be higher or lower than the ETF's net asset value (NAV). Transactions in shares of ETFs will result in brokerage commissions, which will reduce returns. The Adviser's assessment of investments and ESG considerations may prove incorrect, resulting in losses, poor performance, or failure to achieve ESG objectives. The Adviser is also subject to actual or potential conflicts of interest. These and other risks are described in the prospectus.
