## Fund Description

This fund looks to provide investors with consistent, competitive performance through favorable stock selection while monitoring risk. The Fund typically invests in “growth” stocks. Growth stocks are companies whose earnings are expected to grow at an above-average rate relative to the market. Mid-sized companies may be more established than small companies but have the opportunity to experience faster growth as they seek to become large-cap companies. However, they typically have greater risk than larger, more-seasoned companies.

## Investment Strategy/Process

The portfolio management team seeks to add value through stock selection and active management. The Fund invests in a diversified portfolio of growth stocks with improving or positive outlooks relative to market expectations. The process begins with idea generation and screening to identify stocks that have certain characteristics. The team uses fundamental, quantitative and technical investment research techniques to seek to identify and purchase mid-sized companies that are in industries with good economic outlooks and that have strong prospects for growth in their sales and earnings. They also seek to identify companies with high-quality management teams and strong financial positions, and monitor risk in an effort to build a well-diversified portfolio.

Risks: Medium-sized companies often have greater price volatility, lower trading volume, and less liquidity than larger, more established companies. The Fund's value is influenced by factors impacting the overall market, certain asset classes, certain investment styles, and specific issuers. Markets may also be impacted by domestic or global events, including public health threats, terrorism, natural disasters or similar events. Common stocks of companies that rely extensively on technology, science or communications in their product development or operations may be more volatile than the overall stock market and may or may not move in tandem with the overall stock market. The Adviser's assessment of investments may prove incorrect, resulting in losses or poor performance. These and other risks are described in the prospectus.
