Inception Date **Total Fund Assets** **Ticker**
Oct. 31, 1997 \$847.3 million LBHIX

Fund Description

This fund invests primarily in corporate bonds that are either unrated or rated as “below investment-grade,” commonly known as “junk bonds.” Credit rating agencies evaluate bond issuers and assign ratings based on their ability to pay interest and repay principal as scheduled. Bond issuers that are considered to have a greater risk of defaulting on payments pay higher interest rates to compensate investors for the additional risk. The Fund is managed as a “core” high yield fund that emphasizes bonds in the middle of the high yield credit quality spectrum. The high yield sector may provide portfolio diversification benefits because it has a low correlation to other sectors of the fixed income market and less sensitivity to interest rate risk, but is more risky than investment-grade debt. The Fund may also utilize derivatives to manage duration, or interest rate risk.

Investment Strategy/Process

The portfolio management team seeks to add value through security selection and active management, and monitors risk in an effort to build a well-diversified portfolio. The team uses fundamental, quantitative and technical investment research techniques to determine which securities to buy and sell. Through careful credit research, the team strives to identify U.S. companies that will have adequate cash flows to meet their principal and interest obligations. The team also considers the macro-economic environment and performs an ongoing assessment of relative value and risk. Based on this market outlook, the Fund may take overweight and underweight positions in various industries and may reallocate across the higher- and lower-quality segments of the high yield market.

Risks: Debt securities are subject to risks such as declining prices during periods of rising interest rates and credit risk, or the risk that an issuer not pay its debt. High yield securities are subject to increased credit risk as well as liquidity risk. Convertible securities are subject to additional risks such as interest rate and market risk. Leveraged loans are subject to numerous risks, including liquidity, credit, declines in the value of collateral underlying them, and detrimental legal actions against them. When interest rates fall, certain obligations will be paid off more quickly and proceeds may have to be invested in securities with lower yields. The Fund's value is influenced by factors impacting the overall market, certain asset classes, certain investment styles, and specific issuers. Foreign investments involve additional risks, such as currency fluctuations and political, economic and market instability, which may be magnified for investments in emerging markets. When bond inventories are low in relation to the market size, there is the potential for decreased liquidity and increased price volatility. The Adviser's assessment of investments may prove incorrect, resulting in losses or poor performance. The use of derivatives such as futures involves additional risks and transaction costs. These and other risks are described in the prospectus.
